Practical No.6

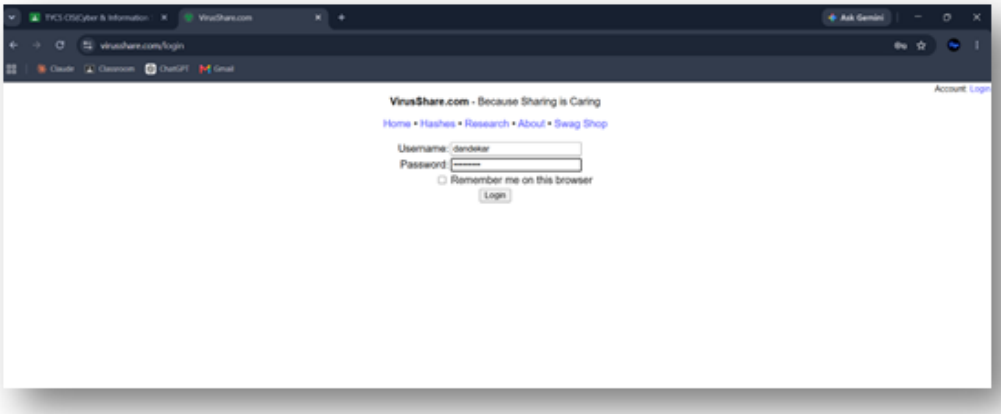

Aim: Malware Analysis and Detection

For analyzing the Malware, we need one. A clean sample of the Malware needs to be downloaded from a trusted website, the downloading and analysis is demonstrated by the following steps:

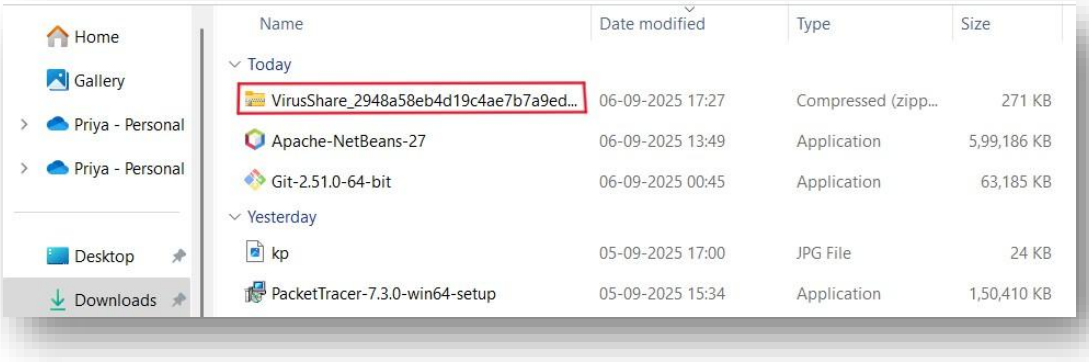

1) We select the website www.virusshare.com for downloading the clean sample of Malware (an account needs to be created for the same). Any other source can be selected to download the Malware (clean sample and authorized site)

2) Open the VirusShare website and click **Account** → **Login**; enter the provided username **"dandekar"** and password **"sdsm@2026"** and click **Login**. (If login credentials are not available, click **About** and follow the instructions to send an email requesting access credentials.)

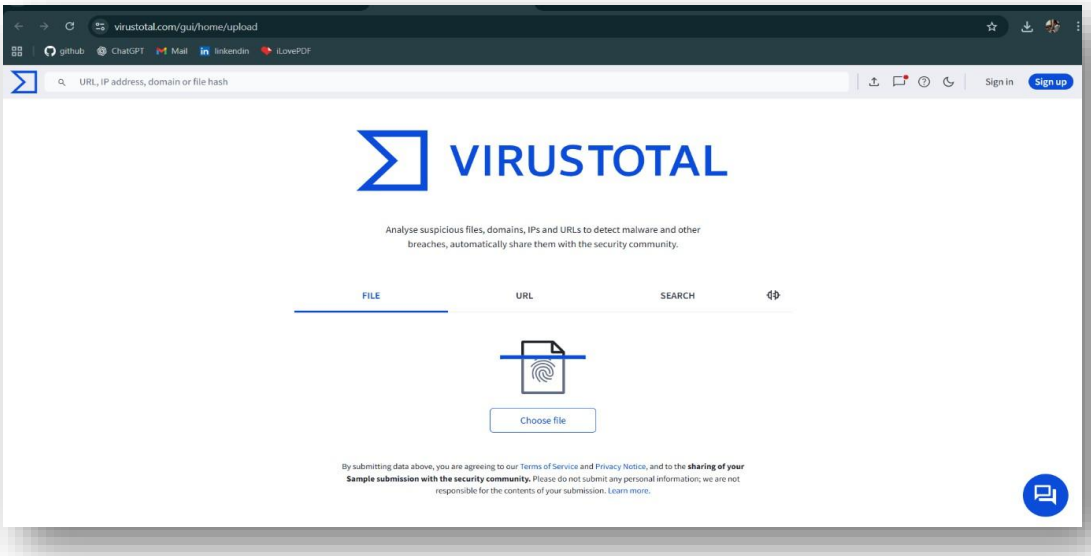

3) By clicking the above download icon the Malware gets downloaded in ZIP format.

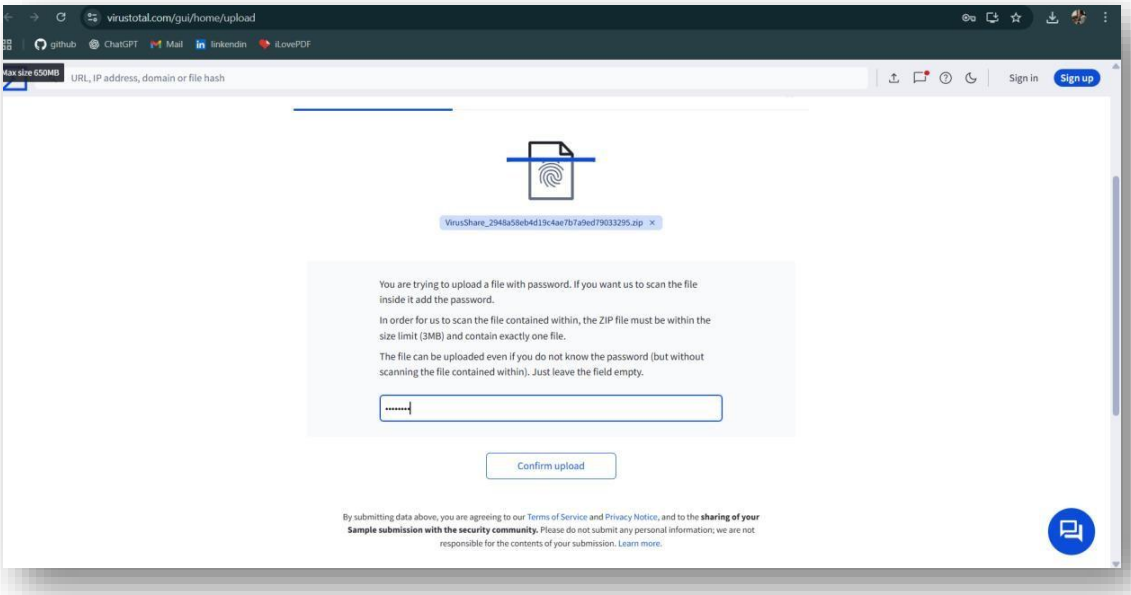

4) For unzip the password is “infected”, there is no need to unzip the file, we create a folder “Malware” on desktop and save the file in the folder

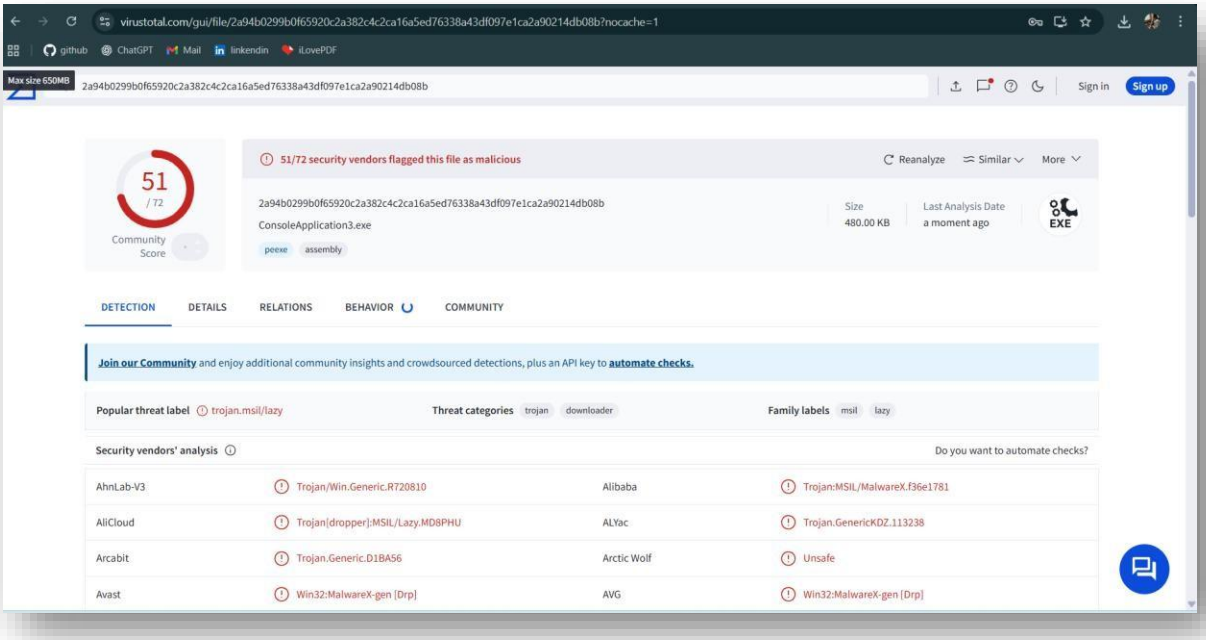

5) In order to analyze the Malware, we select the website www.virustotal.com

6) Click on “Choose File” and select the file from the location (ZIP file will do, if asks for password enter infected)

7) We get the following after the upload is complete

We interpret the following findings

a) 51 security vendors out of 51 flagged this file as malicious
The detection tab shows the threats-type
